CONTRIBUTORS

Leah Armstrong (University of Brighton and Victoria and Albert Museum, London)
Dr Armstrong is University of Brighton/Victoria and Albert Museum Research Officer in Contemporary Design Culture. In 2013 she completed an AHRC-funded Collaborative Doctoral Award with the University of Brighton Design Archives and the Chartered Society of Designers titled 'Designing a Profession: The Structure, Organisation and Identity of the Design Profession in Britain, 1930-2010'. In 2012 Leah curated Portraits: Women Designers for Designing Women at the London Fashion and Textiles Museum, in collaboration with the University of Brighton Design Archives.

Nicola Ashmore (University of Brighton)
Dr Ashmore is a visual artist and Senior Lecturer in the History of Art and Design at the University of Brighton. She has published on curatorial practice in Etudes: Design and Visual Culture; the Journal of Museum Ethnography and the Journal of Curatorial Studies. Nicola is currently involved in a collective project, remaking Picassos Guernica as a protest banner. Through remakings and interventions in found materials she continues to investigate and illuminate how meaning is constructed and held in material form. Her research interests include curatorial practice, artistic interventions and cultural policies.

Sue Breakell (University of Brighton)
Sue Breakell is Senior Research Fellow of the University of Brighton and Archivist at the University of Brighton Design Archives. She has worked extensively in visual arts archives, including as head of Tate Archive and at the Imperial War Museum. Her research engages with the nature, meaning and practice of archives, and mid-twentieth-century art and design through archives. She is editor of a special issue of the journal Archives and Records on the subject of visual arts archives, published in 2015.

Helen Charman (Design Museum, London)
Dr Charman is Director of Learning and Research at the Design Museum, London and was previously Senior Curator of Education at Tate Modern.

Jason Cleverly (Falmouth University)
Jason Cleverly is Senior Lecturer for Contemporary Crafts at Falmouth University. He has developed a series of situational, interpretive sculptural craft works for museums and art galleries, exhibited nationally and internationally and designed works to engender collaboration and co-participation; these artefacts attempt to enhance visitor experiences by promoting informal learning. Many of these projects are developed in collaboration with social scientists at King’s College London. Jason’s PhD presents a critical evaluation of this situated design practice.

Liz Farrelly (University of Brighton and Design Museum, London)
Liz Farrelly writes and edits books and articles about design and popular culture, as well as curating and lecturing on design and visual culture. She has worked on staff at Blueprint, Eye and Etudes magazines and as commissioning editor for book-publishers in the UK, Europe and the US. She has taught across a range of design disciplines and currently lectures in Cultural and Critical Studies at the University of Brighton. Liz is
Contributors

an AHRC Collaborative Doctoral Award candidate researching the future of design museums with a focus on the Design Museum, London.

Guy Julia (University of Brighton and Victoria and Albert Museum, London)
Professor Julia is the University of Brighton/Victoria and Albert Museum Professor of Design Culture, developing and running a research programme that addresses contemporary issues in design, linking the museum, the university and professionals in the creative design industries.

Marianne Lamonaca (Bard Graduate Center: Decorative Arts, Design History, Material Culture, New York)
Marianne Lamonaca is associate Gallery Director and Chief Curator at the Bard Graduate Center: Decorative Arts, Design History, Material Culture. Prior to this she served as Associate Director of Curatorial Affairs and Education at The Wolfsonian-Florida International University in Miami Beach where she was responsible for the interpretation and care of the Mitchell Wolfson, Jr. Collection of Decorative and Propaganda Arts.

Virginia Lucarelli (Politecnico di Milano)
Virginia Lucarelli is completing a doctorate in Design at the Politecnico di Milano. Her current research investigates museum collections and the market for collectible design.

Megha Raiguru (University of Brighton)
Dr Raiguru is a Senior Lecturer in History of Art and Design at the University of Brighton. She has published on museum interventions artistic practices in the Journal of Visual Arts Practice and the Journal of Museum Ethnography. Megha’s postdoctoral research studies postcolonial identities performed in public spheres with a focus on South Asian people’s migration experiences through material and visual culture analyses and oral histories. She is also an arts practitioner working in video, sculpture and textile and has exhibited her work in India, the UK and the US.

Gillian Russell (Royal College of Art, London)
Gillian Russell is a doctoral candidate in Design Products at the Royal College of Art, London. Her research addresses the relationship between emerging design practice and museums, and is being undertaken as part of an AHRC-funded Collaborative Doctoral Award with the Victoria and Albert Museum. She is co-founder of the design think tank DeTink.com, and since 2006 has been Senior Tutor in the MA Curating Contemporary Design Programme at Kingston University, London (run in partnership with the Design Museum, London).

Jana Scholze (Victoria and Albert Museum, London)
Dr Scholze is Curator of Contemporary Furniture and Product Design at the Victoria and Albert Museum, and is also Exhibitions Review Editor for the journal Design and Culture.

Nicola Stylianou (Open University)
Dr Stylianou was awarded her PhD in 2013 for research into the little known African textile collection at the Victoria and Albert Museum. Her PhD was funded by an AHRC Collaborative Doctoral Award between the Research Centre for Transnational Art, Identity and Nation (TRAIN) at the University of the Arts London and the Victoria and Albert Museum. She currently works as a Research Assistant at the Open University.

Deborah Sugg Ryan (Falmouth University)
Dr Sugg Ryan is Associate Professor of History and Theory of Design at Falmouth University. She started her career as a curator at the Victoria and Albert Museum and also worked for the Design Museum as a guest curator. Deborah writes on the design and material culture of the home, as well as the spectacle of commercial exhibitions.

Damon Taylor (University of Brighton) Dr Taylor is Senior Lecturer in Design at the University of Brighton. He has a BA in Design History from Staffordshire University, a Masters degree in Cultural Studies from Leeds University and his PhD, Design Art Furniture and the Boundaries of Function: Communicative Objects and Performathe, was awarded by University College Falmouth in collaboration with University of the Arts London. He has worked at a range of leading institutions across the sector and for three years was head of Historical and Critical Studies at Buckinghamshire New University. He was Postdoctoral Research Fellow in the Department of Industrial Design Engineering at Technical University Delft in the Netherlands, and as well as being a teacher he is also a writer and performer.

Joanna Weddell (University of Brighton and Victoria and Albert Museum, London) Joanna Weddell has a background in architecture and is currently researching post-war design and museology at the Research Department of the Victoria and Albert Museum and the University of Brighton (AHRC Collaborative Doctoral Award); she also teaches History of Art.

Gareth Williams Gareth Williams is a writer, educator and curator, and until 2014 was Senior Tutor in Design Products and Reader in Design Curating at the Royal College of Art. Formerly Gareth was Curator of Furniture at the Victoria and Albert Museum. His latest book is, Design: An Essential Introduction, London: Goodman Fiell/Design Museum (2015).

Tom Wilson (University of Brighton, Design Museum, London and British Council) Tom Wilson is Head of Collection and Research at the Design Museum, London. He is completing an AHRC-funded collaborative doctorate at the University of Brighton and the Design Museum, researching the design and display strategies of the Commonwealth Institute in London. In August 2013 Tom was Curator in Residence at the National Institute of Design in Ahmedabad as part of the British Council’s Design Curation Programme in India.

Ness Wood (University of Brighton) Ness Wood is a design historian and practitioner. She is a doctoral candidate at the University of Brighton with the research title Green Shield Stamps: an investigation into consumer loyalty, thrift and the domestic economy. Her BA dissertation on the manufacturer Hille was awarded both the Design History Society and the Association of Art Historians’ Essay Prize and her MA research investigated the Council of Industrial Design and the Designs of the Year. Ness is an award-winning children’s book designer, who works with many well-known authors and illustrators. She has been a judge at the prestigious Bologna Ragazzi Award and has taught publishing in Ethiopia through the British Council.

Jonathan M. Woodham (University of Brighton) Professor Woodham is a leading figure in the development of the history of design as an academic discipline over the last four decades. He was Director of the Centre for Research and Development (Faculty of Arts) at the University of Brighton from 1998 to 2015.
PREFACE

Jonathan M. Woodham

In order to understand the distance that research, learning and teaching in design history has travelled over the past four decades and more – with all of its meandering byways, diversions and occasional off-road excursions – it is useful to review some elements of the mapping process. Such reflection also helps to clarify the ways in which a book such as Design Objects and the Museum is able to make a valuable contribution to theoretical, historical and curatorial discussions about the ways in which designed objects are addressed within the wider context of art and design history, object analysis and meaning, and museums and display.

In the mid-1970s, when the history of design emerged as an academic discipline that was seeking to establish its own distinctive place within the British higher education provision in the arts and humanities, there were a number of different considerations that both conditioned and challenged its standing. In this context a major location for early design historical research, curriculum design and teaching and learning design was to be found in the newly formed British Polytechnics (today’s post-1992 universities) that, since the mid-1960s, were often formed through the amalgamation of local and regional colleges of art and design, technology and education. Indeed, a number of historians have seen this highly significant phase of educational change as one in which the history of design derived from a clear relationship with the changing requirements of art school education brought about as a consequence of the Coldstream and Summerson Reports. These had, in effect, brought about the compulsory introduction of historical and complementary studies that were seen to have an ‘academic’ content that raised the status of the existing broad-brush art and design curriculum from what was widely seen as worthy of a vocational award (the two-year National Diploma in Design – NDD) to the more substantive academic equivalent (the three-year Diploma in Art and Design – Dip. AD) of degree awards prevalent in other disciplines taught in the pre-1992 universities. Degrees commanded higher salaries in the teaching professions, and an employment destination for many of those completing courses in art and design.

However, the realities of those earlier years were more complex since the pedagogic intricacies of this period were greater than many written accounts have allowed. Many of those involved with the contemporary curriculum development and teaching of, and research into, design history were graduates in art and architectural history in the ‘old’ university sector. A significant proportion had been trained in what came to be seen as conservative approaches to studies in visual and material culture with an emphasis on creative personalities, movements and styles, although within a comparatively short period of time the more challenging approach of what became known as the New Art History came into play. A number of others involved in shaping the design history agenda were drawn from a variety of other disciplinary origins. These included Gillian Naylor (1931–2014), who had read modern languages at Somerville College, Oxford University before working on the Council of Industrial Design’s Design magazine in 1957, then under the editorship of Michael Farr, a former student of English taught by E. R. Lewis at the University of Cambridge. Naylor went on to a number of academic posts including Brighton College of Art and Design/Brighton Polytechnic between 1964 and 1971, Kingston Polytechnic, and the Royal College of Art where she was Professor. Farr had set up his own design management consultancy, Michael Farr (Design Integration) Limited, in central London in 1962 and published his pioneering book on Design Management (1966). From the early 1970s, while still managing his consultancy, he was teaching design
history to all Multidisciplinary Design degree students at North Staffordshire Polytechnic before he was appointed to lead (1976–1987) the Swire School of Design in Hong Kong. John Henkett (1937–2014) was also another formative voice in the development of the history of design and brought yet another set of considerations to the table, having read economics, politics and history at the London School of Economics. This underpinned his interest in developing a wider design historical and design agenda embracing national identities, the State, and public organizations as well as the international growth and power of corporations. The museums sector was also represented in early discussions about the scope, nature and purpose of design history amongst what Penny Sparke described as a group of academics based in several of Britain’s art schools (then part of the polytechnics...) who developed the discipline of design history and theory. Complementing these was Carol Fagin, the Deputy Keeper of the Circulation Department at the Victoria and Albert Museum (V&A). Through its Travelling Exhibitions service, V&A was responsible for loans of non-specialist art and design collections to regional museums and schools with the aim of educating the general public in the value of design.

Another contemporary phenomenon that provided a significant impetus in the early years of shaping the design history curriculum and research agenda was the work of key figures such as Tim and Charlotte Benton, Bridget Wilkins, Stephen Bayley, Stephan Mathesius, Peter Reyner Banham and Adrian Forty, all of whom had contributed to the pioneering Open University Course A305, *The History of Architecture and Design 1890–1939* (1975). Of particular note was that this course was supported not just by *Documents: a collection of source material on the modern movement*, but also by a Radiovision booklet to accompany a series of specially commissioned linked-in radio broadcasts, a similarly conceived set of television programmes that provided expert contemporary and historical critical commentary, as well as television ‘site visits’. Also part of this integrated audio-visual learning package were books of images and a wide variety of texts designed for distance learning. The latter were not only devoted to mainstream design movements of the period (such as the late Arts and Crafts, Art Nouveau, the Deutscher Werkbund, Modernism, Art Deco and Streamlining) but also included material on semi-detached suburban housing, the electric home and mechanical services.

Forty years on from such a launch pad of exciting possibilities we are now firmly embedded in the digital age with emergent research extending the scope of the digital humanities. However, the development of the design history curriculum has not perhaps made the quantum leaps that might have been expected in the years since the A305 curriculum was researched, produced, presented and consumed, especially given the production of hundreds of doctorates worldwide and more specialist journals that help to underpin and promote the field, most notably *The Journal of Design History* (1988–). It was suggested in 2013 that ‘with the publication of three key texts within the past two years design history “seems to have reached a certain level of maturity”’ (Hippertz and Less-Maffei 2013); it was also considered that one of these, *The Design History Reader* (Less-Maffei and Houze 2010) surveyed the field, its methods and key themes. The question might be raised as to how far it differed from earlier ‘readers’ and quotation and source books, particularly in relation to the range of authors and geographical locations selected for inclusion. To what extent was this work designed to accommodate a more pluralist approach to the teaching and learning of design history or histories, the significance of peripheries as well as centres, and reaching beyond the familiar and dominant Anglophone map that many researchers worldwide have sought to enhance?

In the context of this book, a positive sign of the maturity of design history might be the range of contributors. They come from a variety of stages of their research careers, from doctorands to seasoned professionals, drawing on academics, curators, museum professionals and archivists as well as designers and makers. This is in marked contrast to the earlier design historical world of the 1970s when there was a distinct lack of doctoral theses, dedicated journals, interest from publishers beyond celebrated designers, styles, movements and periods, and relative uncertainty about the range of primary source materials that were
Preface

most germane. Contributors to this book have been drawn from the UK, North America, Italy and Germany and the editors are engaged in collaborative research projects with the Research Department at the V&A and the Design Museum, London. Furthermore, the three themes of Design Objects and the Museum – The Canon and Design in the Museum, Positioning Design Within and Beyond the Museum, and Interpretation and the Challenge of Design – re-address, re-evaluate and considerably deepen our journeys into many of the territories that were first encountered as parts of the early, tentative steps of design history.

Notes

1. Sir William Coldstream became a major influence on British art education through chairmanship of the National Advisory Council for Art Education, which published two major documents that became known as the First and Second Coldstream Reports (1960 and 1970).

2. Sir John Summerson was appointed by the Ministry of Education in 1961 to chair the National Council for Diplomas in Art and Design (NCIAD), which set up as an independent self-governing body to administer the award of diplomas (Dip. AD) available to students in colleges of art and design. The Summerson Report on Diplomas in Art and Design was published in 1964.

3. On top of a one-year Pre-Diploma course, making a four-year total overall.

4. See, for example, Hazel Clark's 'Design History and British design education. An appraisal', in Eliava: Temas de Diseño.

5. For a fuller account of some of the background and opinions of a number of participants in the early phases of design history see 'The Design History Society Oral History Project'.

8. Author of Design in British Industry: A Mid-Century Survey, 1955. This foreword was written by Nikolaus Pevsner who also oversaw the art that complemented his own Enquiry into Industrial Art in England, 1957.

9. At the Royal College of Art where Naylor became Professor of Design History and inspired several generations of design historians at Masters and PhD level.

10. In 1968 this became Farr Ergonomics Limited, using the same premises and staff on London's Tottenham Court Road.

11. The author, educated as a fine artist and art historian, was first acquainted with Farr's year-long compulsory design history in 1974, co-taught with Catherine Netherwood, an inspiring young textile designer who undertook many textile commissions for Heal's, London. He sat in on all their lectures and, following Farr's (and Netherwood's) departure to Hong Kong, took on the delivery of this course.

12. John Hackett was the author of the pioneering introductory text, Industrial Design, 1980, and several other defining texts that helped to shape an understanding of design in the everyday world.

13. See Penny Sparke's 'John Hackett Obituary' in The Guardian. Sparke was herself a leading light in the development of design history in its early years, at Brighton Polytechnic, before moving to the Royal College of Art in 1981 and then Kingston University where she took on a senior management role whilst continuing to research at a high level.

14. For a more complete and well-researched account of the V&A's Circulation Department see, for example, Joanna Weddell, Room 38A and beyond: post-war British design and the Circulation Department, in V&A Online Journal, 2012.

15. Some saw design history at degree level (BA) and degree equivalent (Dip. AD) status in British higher education in the mid-1970s as a challenge to more established disciplines, particularly art history. At that time, when design
Preface

Historians were looking for representation on the Association of Art Historians' executive committee as a means of strengthening their place in national higher education provision, the then Chair of the AAH was anxious to ensure that only an art historian should represent the design historical cause and pressured the proposed candidate to withdraw. Today, and for several decades since the 1970s, the AAH community has warmly embraced design history.

ACKNOWLEDGEMENTS

The Association of Art Historians' 2013 Annual Conference at the University of Reading had a conference session convened by the editors on the subject of Design Objects and the Museum. We would like to thank the Conference Organisers at the University of Reading, Dr Paul Davies and Dr Sue Molden, the Conference Administrator, Cheryl Platt, and the Conference Contact at the AAH, Claire Davies. We are grateful to the contributors who spoke at our conference session: Sue Breckell, Helen Charman, Jason Cleverly, Virginia Lucarelli, Gillian Russell, Deborah Sugg Ryan, Damon Taylor and Gareth Williams. We would also like to acknowledge the contribution of Dorothy Barends, of Kwantlen Polytechnic University, Vancouver, who delivered an invaluable paper, Object Lessons: Vancouver) Tobias Wong. We are grateful to our contributors: Leah Armstrong, Nicola Ashmore, Guy Jolles, Marianne Lamonica, Megha Raiguru, Jana Scholte, Nicola Styllianou, Tom Wilson and Neill Wood. Jonathan Woodham has kindly provided the Preface. Last but not least, our gratitude goes to our commissioning editor at Bloomsbury, Rebecca Barden, and her editorial assistant, Abbie Sharran, for their help and support.
INTRODUCTION
Joanna Weddell and Liz Farrell

This book was prompted by the comment from a respondent to Bourdieu and Darbel's survey: 'Maybe there should be museums with modern stuff in them, but it wouldn't be a proper museum' (Bourdieu and Darbel 1969:48). Despite its title, The Love of Art features an exhibition of contemporary design held in Lille, 'The Art of the Interior in Denmark', which showed 'everyday objects such as glass and crystal, ceramics and furniture', introducing the 'atmosphere of the department store'. Bourdieu and Darbel compare the art gallery with this 'poor man's museum' stressing the contrast between the sacred and the profane: 'untouchable – touchable; noise – contemplative silence; swift and haphazard exploration – slow and orderly procession; involved appreciation of vernacular works – pure appreciation of "priceless" works; all of which notionally puts the museum of contemporary design as one offering a distinct experience (Bourdieu and Darbel 1969:50, 89).

This book addresses the place of contemporary design objects within museums and the wider discipline of art history, with a focus on the interpretation of design. The chapters cover the collection, study and exhibition of contemporary design, from the unique, fetishised decorative object to the mass-produced industrial commodity. Chapters give perspectives on historical developments in the post-war period and aim to expand live debates on the future place of design objects in the museum. The book raises issues around design in relation to the canon, museums and interpretation in the late twentieth and twenty-first century. Current government agendas on culture and education may stress global competition but should high-quality design objects be preserved as rival cultural products or, alternatively, should the latest gadgets be studied as examples of industrial process? Does design, in the museum context, represent a rare negotiation between art and industry, state and citizen, the official and the popular, eliding categorization as a straightforwardly commodified or aestheticized object? Or does it simply canonize an edifying notion of 'good taste'? Does contemporary design, which is often ephemeral or 'process-based', stretch and strain the collecting and display procedures of the museum? And, in a world of multiple choices, is there still a need for the museum to promote 'good design' to the public?

The debate is structured into sections on the relationship between the traditional canon of art history and design, on the position of design within and beyond museums, and on the challenges and opportunities that contemporary design presents to curatorial interpretation.

Part I: The Canon and Design in the Museum

The first section relates to the notion of the 'canon' of art history and, by implication, museological practice and issues that arise when placing design within museums, progressing through post-war concepts of 'good design' to the contemporary. The London-based chapters in Part I show a trajectory leading design from wartime restrictions through the expansions of trade and consumption, and the institutionalization of design promotion, to the emergence of new models of analysis in relation to gender and class, and on to the present.

The chapter order is broadly chronological and begins with Breckell's examination of how the archetype of the mid-century art historian, Kenneth Clark, engaged with 'good' post-war design, drawing on her extensive knowledge of the Kenneth Clark Archive at Tate. As Breckell explains, a series of exhibitions of domestic
Introduction

design organized by CEMA built on the propagandist aims of Utility design and culminated in the little-known Design at Home exhibition, 1945, held in the surprising venue of London's National Gallery.

The philanthropic paternalism characteristic of the Attlee government is a thread followed by Weddell who discusses the ways in which the radical ethos of the Victoria and Albert Museum (V&A) Circulation Department (Circ) under Keeper Peter Floud was demonstrated by its activities between 1947 and 1960. Circ exhibitions of contemporary design may have deliberately flouted the V&A’s then canon, but they remained true to the Museum’s founding purpose. The chapter elaborates Floud’s complex position regarding the handmade, the mythologizing of craft and the evolving discipline of industrial design, particularly in relation to US influences.

There were no such concerns or complications for the Council of Industrial Design (CoID). Wood uses the significant displays of the 1957 Designs of the Year (DOTY) at CoID’s new Haymarket Design Centre to examine design in relation to class, taste and consumption. The DOTY selections were not consistently brave, modern or progressive as Wood’s detailed examination of correspondence (between the institution and its judges) demonstrates, revealing the limits of British establishment taste.

Stylianos returns to the V&A where the donation of Hayes Textiles was accommodated by the Museum canon because it met the criteria of representing British design. The Museum’s founding collections define its remit even though these arrived from disparate sources and were formed by various motives. In examining the relationship of the Nigerian gelé to the V&A collections, Stylianos highlights the complexity of transnational processes, as the UK textile company designed for its colonial market.

Of more recent foundation and with an avowedly more commercial and industrial remit is the Design Museum, London, which emerged from an earlier prototype, the Boilerhouse Project at the V&A. Sugg Ryan engages with design exhibitions that break the curatorial mould, discussing her role as curator of the Design Museum’s Ideal Home exhibition, 1993. The limitations of even a contemporary canon are demonstrated through reactions to his museum’s representation of a truly popular and commercial trade exhibition and by examining the media coverage of Constance Spry: A millionaire for a few pence, 2004, also at the Design Museum, London.

In contrast to younger design museums, commentators might see the V&A as the ‘lumbering old mother museum’ (Pearman 21:14) but Scholze explains the Museum’s efforts to evolve and adapt in an age not dissimilar to Prince Albert’s period of most wonderful transition’ with its ‘achievements of modern invention’ (Martin 1877). Scholze discusses the challenge to curatorial practice represented by digital objects that resist traditional insistence on singularity and provenance but that can nevertheless be documented. With her account of the 2013 acquisition of the 3D-printed firearm, Liberat or, Scholze brings the canon up to date.

Part II: Positioning Design within and beyond the Museum

Part II discusses the positioning of contemporary design within and beyond the art gallery, the national museum, the commercial space, the design museum and onto broader national and international stages, in the process extending debates about design versus art by examining newly minted terminology, such as Design Art and World Art. The section expands from the new museology approach of New Labour to cover dynamic, narrative and outward-facing curatorial roles in the UK and Italy – closing with the re-visioning of design in a Scandinavian museum.

Rajguru and Ashmore recount contemporary curatorial activity around an historic collection in Brighton where designed objects are positioned as world art, perhaps as curious others. Their chapter pays close attention to the specifics of labels and curatorial strategies to evaluate the Hindu Shrine Project performances.

and outreach exercises undertaken in Brighton in relation to displays at the Raja Dinkar Kelkar Museum, Pune, India.

Lucarelli outlines the curatorial strategies that, each year, reposition the displays at the Triennale Design Museum (TDM), Milan, using a dynamic model that rejects the static monolithic permanent collection of the design museum. The TDM approach questions museological authority — itself always subject to successive revisions — creating a structure of multiple loans from beyond the museum. This openly transient multiplicity of readings can be seen as a refutation of Marinetti's museum/cemetery paradigm (Marinetti 1909).

Narrative readings are the subject of Taylor’s chapter, which examines two temporary exhibitions of contemporary furniture that inhabit the category of Design Art, one show positioned in a commercial gallery and the other in the UK’s national museum of art and design. Through these shows Taylor makes a subtle analysis of definitions of design and its relation to art. The category of Design Art might be contemporary but perhaps bears similarities to those virtuoso displays of modish technique that formed part of the spectacle of the nineteenth-century world’s fairs.

Williams (incidentally the curator of Telling Tales, the subject of Taylor’s chapter) discusses what he sees as modern versions of the world’s fairs (including the expo) and the role of contemporary design as soft diplomacy beyond the museum. In addition to this form of state design patronage, he recognizes a further, semi-national strategy, in the liminal spaces between borders and cultures such as the airport terminal, only now with the co-option of the museum. Williams’ wide-ranging examples, from 1851 to 2012, from Shanghai to Heathrow, build to an optimistic conclusion about Britain’s role as an intersection for cultural design.

Pursuing a Scandinavian angle, Russell examines the recent exhibition Risk Centre at the Arkitekturhuset, Stockholm, which re-appraised and re-positioned what design in the museum can achieve. Here critical design is seen to subvert passive space within the museum and re-assert the role of design as process seen through the lens of Rogoff’s embodied criticality.

Part III: Interpretation and the Challenge of Design

The final Part examines the challenge presented by contemporary design to interpretation and learning in the museum, and the role of curators, exhibition designers and visitors in shaping experience and creating meaning. Contemporary design in the museum is examined as political, as postcolonial and as engaging the visitor, and by implication extending the activity and reach of the design museum.

This section begins with a personal and retrospective glance at the curatorial challenges presented by design in the Wolfsianum, Miami Beach, by objects produced under various political regimes both fascist and socialist, beyond the well-tempered middle market humanism that characterizes much twentieth-century ‘good design.’ Lamonaca’s selection and presentation of works in the distinct context of the museum are shown to reveal the political through a didactic interpretive methodology.

Wilson’s poetic and evocative images communicate the success of another form of retrospective, the You Are Here: NID Traces show, 2013, which re-interpreted the National Institute of Design collection at Ahmedabad from a global perspective. The US-led initiative of The India Report, 1958, authored by Charles and Ray Eames, was adopted, adapted and appropriated, with contemporary interpretation encouraging further participation from design students, teaching staff and the public.

This participative approach is also highlighted by Charman who posits a distinct difference between curating and interpreting design as opposed to contemporary art. Charman’s text moves from theory to the voices of design museum curators and visitors in an innovative approach based on visitor studies conducted at the Design Museum, London.
Introduction

Visitor engagement is again a priority for design-maker-curator Cleverly who foregrounds the noise and animation of his interventions. Cleverly analyses a variety of interpretive approaches that expand the boundaries between art and science, enhanced by his experience instigating interactive museum displays. The goal is not simply to interpret but also to produce a new site-specific object.

Armstrong and Jailer examine the recent Design Culture Salons at the V&A, representing a new era in social engagement for the design industry and the museum. Design Culture Salons seem to be a diversion from the production, preservation or curation of contemporary objects, however the format has much in common with that nineteenth-century manifestation of a salon for all, the Mechanics Institute. These provided a locus where designers and makers forged and tempered their thoughts and ideas in evening discussions away from the factory floor or drafting office: the DCS presents us with a more contemporary version, tweeted, blogged, streamed, vlogged and tubed.

Farrell examines the evolution of interactivity beyond the gallery and onto the Internet, looking at how digital technology has shaped the online offer of the museum, through digitized archives and collections, more transparent management and new opportunities for public engagement. As the museum becomes a networked community, Farrell examines implications for the object.

In conclusion

The museology of the art museum has been extensively discussed, published and taught while that of the design museum has received less attention. This imbalance reflects the status and position of the (at least notionally) functional objects housed by museums of design compared with fine art. Tensions around definitions of design are revealed by the range of categories available: design may be applied arts, decorative arts, material culture or those anxiety-promoting versions – industrial and commercial. Design may be hand-, batch- or mass-produced, a one-off or a branded object created by a global network of design, production, distribution and marketing. Divisions between science and art, between technology and the visual, between factory and studio, are made evident in the more ambiguous position of design and designers in contemporary commerce and culture compared with the megastars of the art world and the academic dedication of scientists. And for museums tasked with the collection and display of design, this imbalance is further complicated by troublesome ambiguities; in a world where objects are fast losing their materiality the definition of design becomes more and more unstable.

What is the project to which this book contributes? Oppenheim’s fur-covered cup and saucer is art while the Roberts R500 zebra-skin radio is design, Jeff Koons’ double-decker vacuum cleaners provoke thought while Dyson’s cyclone cleaners generate profit and political debates about the globalization of production and consumption. The identity of the design museum is related to its past, to its genesis in various trade initiatives by nineteenth-century government; unsurprising then that some of the most recent versions have obvious commercial ties. Fine art and decorative art are cultural constructs that may prove irrelevant as the museum begins to accommodate the products of the digital age, but the future mission of the design museum remains tied to its industrial past. The place and literature of the design object compared with the work of art may be distinct but is of less interest, and as Tobias Wong’s brief career proved, boundaries between the two can and should be crossed: such transgressions are not easily contained nor defined. By presenting a wide range of voices, approaches and subject matter, we hope this book will push beyond the disciplinary boundaries that might too closely define areas of interest, and instead develop wider debates around the intersection of the designed object and the museum.
Cleverly who foregrounds the noise and superfluous approaches that expand the activity of interactive museum displays, The object: at the V&A, representing a new era in culture salons seem to be a diversion project, however the format has much in common with the Mechanics Institute. These provided insights and ideas in evening discussions with us with a more contemporary version, and onto the Internet, looking at how much digitized archives and collections, engagement. As the museum becomes a place of knowledge and pedagogy, the focus on the object is expanded, and the relationships between design and the viewer are explored in more depth.

PART I
THE CANON AND DESIGN IN THE MUSEUM
CHAPTER 1
EXHIBITING ‘THE TASTE OF EVERYDAY THINGS’:
KENNETH CLARK AND CEMA’S WARTIME EXHIBITIONS
OF DESIGN
Sue Breakell

For a brief period in the second half of the Second World War, the Arts Panel of the Council for the
Encouragement of Music and the Arts (CEMA), led by Sir Kenneth Clark (1903–1983), experimented
with extending its remit into exhibiting design. This little-studied series of exhibitions, between 1942
and 1945, involved the Council in an emerging debate about the responsibility for state-endorsed display of
design objects, and contributed to the blurring of traditional boundaries between the museum, commercial
exhibitions and the particular aesthetic of the wartime propaganda display. Clark, whose engagement with
design was at a peak during this period, was involved in all of these fields: he was Chair of CEMA’s Arts Panel;
he was Director of a national museum, albeit one with no remit for design (National Gallery, London, 1933–
1945); and he was involved in discussions that led to the establishment of the Council of Industrial Design
(CoID) in 1944, with a remit that included the exhibition of design.1

The pursuit of shared wartime aims through exhibitions brought together museological, commercial and
propaganda perspectives, in varying proportions and in unprecedented ways. Display was an effective means
of articulating values in wartime, and Clark’s Art Panel showed a tendency to seek to reconcile past and
present so as to establish continuity in what was being fought for. For CEMA, with its bent towards the
art world, the transformative involvement of Misha Black and Milner Gray was particularly significant, as
members of both the Design Research Unit (DRU) and the Ministry of Information (MOI) exhibitions
department, the influence of which has been widely discussed (Davies 2008; Cotton 2010). In his book
Exhibition Design Black quotes an unnamed commentator as saying ‘in no other field of art and architecture
have the war years brought so generous and so healthy a harvest as in exhibition design’ (Black 1950: 11).

CEMA was established in December 1939, with Clark one of the initial committee appointed by the Board
of Education, ‘to maintain the highest possible standard in our national arts of music, drama and painting at a
time when these things are threatened and when too they mean more to the life of the country than they have
ever meant before’ (V&A EL 1/2).2 CEMA’s work was structured around three panels: Art, with Clark its
Chair; Music; and Drama. A major component of the Art Panel’s work was touring exhibitions, initially
through the British Institute for Adult Education’s (BIAE) Art for the People scheme. Clark said in October
1940 that the circulating exhibition scheme ‘gave real hope for the future because it was laying the foundations
of a popular understanding of living art and living artists… it was the one channel open for getting in touch
with ordinary people and creating among them a new and genuine appreciation of painting’ (V&A EL 1/3, 6th
meeting).

His colleague Bill Williams described it as ‘pioneering work in unsophisticated communities’ (V&A EL 1/6,
Council Paper 119), suggesting the values of benign paternalism that underpinned this programme for
the dissemination of culture. From 1942 CEMA organized its own exhibitions as well; these were intended to
be ‘more sophisticated’ (V&A EL 1/15, Council Paper 137) than the BIAE’s smaller scheme, suggesting that
certain communities were expected to be more receptive. CEMA also began an art collection, commissioning
Design Objects and the Museum

and purchasing artworks with a complementary purpose: to give illustrations of pleasing and competent contemporary work, which might be bought by ordinary people and lived with in ordinary homes' (V&A EL120).

As CEMA's programme of art exhibitions expanded in scope and geographical coverage, it was but a short step for such a mission to incorporate design. It began to include design exhibitions with a broadly similar aim of developing the public's confidence in buying, or what in a fine art context Clark called patronage: both design and patronage were growing interests of Clark's at this time. At the opening of an early exhibition of the CEMA art collection in 1942, he declared that the show was 'not so much an attempt at state patronage, as an encouragement to private patronage . . . its very modesty is a proof that painting is not solely a thing for public galleries, any more than flowers are things for public gardens' (TGA 8812/2/2991). Before the war, design had been a peripheral engagement for him: for example, his membership of the Post Office's Poster Advisory Group, or opening an exhibition of commercial art at Shell, reflected his status as an establishment expert and sometime with 'taste'. As the war progressed, Clark became increasingly involved in design, as a practical means of employing fine art – and artists – in the projects of wartime propaganda and post-war reconstruction. Alongside his work with the War Artists' Advisory Committee and a string of other arts-related committees, design was another way to encourage aesthetic appreciation and thus a kind of artistic patronage by both industry and public. 'During the last twenty years, artists have come to look hopefully towards industry as a patron' (Clark 1944).

Clark was also an active member of the Weir Committee, appointed by the Board of Trade, generally considered as the immediate bureaucratic trigger for the formation of the Council of Industrial Design in December 1944, whose mission was to promote by all practicable means the improvement of design in the products of British industry (CoID 1). Clark turned down the salaried post of Director of the CoID (TNA BT16/1573), but was a founding member and chaired the Design and Exhibitions committee, although he resigned from this role as early as May 1945, which might be considered the start of his disengagement from design. From the start, reaching both public and industry through displays and exhibitions was a priority for the CoID. Such an idea was not new: it had been regularly proposed through the 1920s and 1930s by bodies including the Design and Industries Association and the Council of Art and Industry, as well as in the Gorell report of 1933, all part of the momentum that culminated in the CoID's formation. A letter from Hugh Dalton, President of the Board of Trade, to Thomas Barlow, Chairman of the CoID, in December 1944, reproduced in the Council's first Annual Report, declares the first two functions of the Council to be 'to encourage and assist the establishment and conduct of Design Centres by industries' and 'to provide a national display of well designed goods by holding, or participating in, exhibitions and to conduct publicity for good design in other appropriate forms' (CoID). Through 1945 the National Exhibition of Industrial Design began to take shape; eventually titled Britain Can Make It (BCM1), it was held at the Victoria and Albert Museum (V&A) from September to December 1946.

Meanwhile, under Clark's Art Panel, two strands of CEMA design exhibitions had emerged in 1943. The BIAE, with its remit of reaching 'unsophisticated communities', organized Design in Daily Life for CEMA; 'pottery, glass, textiles and household equipment arranged to demonstrate the importance of form and colour in modern design' (TNA ED136/188A), suggesting that it comprised new or at least broadly contemporary objects. In Clark's archive is a leaflet for Ideas on Design in the Home, a CEMA/BIAE Art for the People exhibition from around 1943–1944; this may be the same exhibition, but if not, it is similar in scope and intent, listing six rules to guide consumer choices: 'the creation of a delightful home is a task which calls for careful estimate of our budget and full use of our powers of discrimination . . . what we should above all strive for is to create an atmosphere of peace and comfort, and to achieve that end we must choose our decorations, textiles and furniture with care' (Ideas on Design in the Home, TGA 8812/111/44).
Kenneth Clark and Design

Ilustrations of pleasing and competent design lived in ordinary homes (V&A geographically coverage, it was but a short step exhibitions with a broadly similar aim to context Clark called patronage: both At the opening of an early exhibition of so much an attempt at state patronage, as of that painting is not solely a thing for " (TGA 8812/2/2/391). Before the war, membership of the Post Office's Poster Department, reflected his status as an establishment increasingly involved in design, as is of wartime propaganda and post-war Committee and a string of other arts-appreciation and thus a kind of artistic activity, artists have come to look hopefully inted by the Board of Trade, generally of the Council of Industrial Design in means the improvement of design in the area post of Director of the CoID (TNA nd Exhibitions committee, although he red the start of his disengagement from splay and exhibitions was a priority for through the 1920s and 1930s by bodies Art and Industry, as well as in the Gorell 's formation. Design Objects and the Museum

The objects are all contemporary, and listed with their lenders: manufacturers including Wedgwood, Powell and Edinburgh Weavers, as well as designers such as Allan Waltons and Helen Pincombe, and, in one case, the British Colour Council.

In 1943, the V&A prepared for CEMA a show of quite different conception, called Design in the Home. Interposing pieces from the Museum's collections with contemporary objects, which did not fall within the Museum's collecting or exhibiting remit at that time, it declared the aim of showing continuity between traditional English design and a more modern sensibility: 'a ... few older objects ... side by side with contemporary works, to illustrate something of the character of the English tradition, with its stress on the beauty of simple forms and restrained and sober colours, and its practical regard for the requirements of use' (exhibition leaflet, 2CA).

Not only was such an aesthetically oriented purpose much more in line with the exhibition practices of a museum, it also matched Clark's own position within the broad spectrum of attitudes to modernism, in relation to contemporary art and design: for him, it was important that contemporary pieces maintained continuity with the vernacular British tradition, rather than simply appropriating the characteristics of international modernism. Indeed, this question would prove fundamental to his disillusionment with the possibilities of initiatives such as the CoI D, in the post-war period (Breakell 2015). In 1953 he wrote: 'aesthetic faculties ... reflect the whole character of a civilisation ... which is outside the scope of the Council of Industrial Design or any similar body. ... In practice, efforts to improve the taste of everyday things consist in the cutting down of ornament, thus depriving the object of that marginal endurance which gives the craftsmanship of the past its charm for us' (TGA 8812/2/24/7).

A CEMA leaflet entitled 'Art for the People' refers to the V&A exhibition of 1943 as 'arranged to show the continuity of good design in a few objects of everyday use in English homes' (TNA ED 136/188A). The exhibition leaflet itself combines aesthetic and commercial approaches, referring to 'simple beauty of form' as well as to the moderate price and manufacturing costs of the contemporary objects displayed, reflecting the ideas that underpinned the notional of Good Design associated with the Utility Scheme (see, for example Attfield 1999).

Although the BIAE exhibitions toured to regional museums, there is nevertheless a clear distinction here between those exhibitions organized by museums and those that were not; CEMA exhibitions were 'more sophisticated' than the BIAE's not only in their inclusion of museum objects, but in their curatorial and organizing methods, bringing the V&A's authority to what might otherwise be seen as a propagandist exercise.

These design exhibitions, and the questions they raised about CEMA's contribution to this field, culminated in a larger exhibition, Design At Home, 1945, whose shape evolved in discussion with the Board of Trade and a panel of industrialists, and thus with direct reference to discussions about the emerging Council of Industrial Design and its exhibiting ambitions. In January 1944, at the request of Philip James, then Director of the Art Panel, Misha Black of the Design Research Unit (DRU) prepared a Paper for submission to the CEMA Council, Notes on an exhibition of Industrial design. A covering letter from James explained that: 'the need for an exhibition to encourage the appreciation of industrial design has been expressed in several quarters ... a meeting of industrialists and representatives from departments has been convened to discover whether the idea seems practicable' (V&A EL 1/17, Council Paper 178).

Black's document provides the rationale for CEMA's involvement in such an exhibition, and the expansion of its existing design ambitions:

In its fine art exhibitions, CEMA has unquestionably set the standard for all other exhibiting bodies. ... In the fine arts, music and drama the Council has brilliantly interpreted encouragement of the arts to mean national leadership.

This, however, is not the case as far as industrial design is concerned. The CEMA industrial design
exhibitions have been small in size, few in number and unimpressive in technique . . . While a new small
CEMA exhibition on industrial design would be of some minor value, the time seems to have been
reached when CEMA could reasonably assume, in industrial design, that position of national leadership
which it enjoys in relation to other visual arts.

The design of post-war industrial projects will be a major factor in determining our environment and
in the re-establishment of Britain's export trade. While the latter problem may not be the direct concern
of CEMA, the former seems clearly to come within its province (V&A EL1/17, Council Paper 178).

By claiming determining our environment' as the concern of CEMA, Black chimes with Clark's approach to
design. He refers explicitly to the proposals of the Weir Committee, of which Clark was a member, and to the
display remit of what became the CoID: 'It would be a preliminary experimental prototype of the permanent
British Design Pavilion which I understand is recommended by the Weir Committee'. In asserting for CEMA
a position of 'national leadership', Black makes an extraordinarily bold attempt on the territory already
intended for the Council of Industrial Design.

The number of people in this country able to effectively organise and design an industrial design
exhibition is limited; the problems of materials and exhibition premises are acute . . . instead of organising
Design Objects and the Museum

a new small CEMA exhibition the Council should ... sponsor the production of one major exhibition, sufficiently impressive in size, scope and method of presentation to set a standard for all future shows of this character.

CEMA is the only body with sufficient integrity, prestige and authority to undertake this task. If CEMA is unwilling to do so, we must expect a whole series of exhibitions on industrial design each boosting one particular industry or other, and none with sufficient authority to be accepted by the public and manufacturers as providing that leadership so urgently needed if British industrial design is to be rescued from that pathetic sordidness which is now its characteristic feature (V&A EL1/17, Council Paper 178).

The main Council was supportive of the principle of a larger scale design exhibition: 'An exhibition of Design on a far more important scale than either of the Design Exhibitions so far circulated seemed appropriate at the present moment' (TNA ED136/188A, 5th meeting, 18 Jan 1944). The Board of Trade, to whom the proposal was passed before the meeting of the Arts Panel at which this was discussed, were 'uncompromisingly opposed to holding an exhibition which could not contain objects which were for purchase by the public' (TNA ED136/188A, 5th meeting, 18 Jan 1944); Clark himself later expressed a similar widely held concern about BCMI, writing to the ColD's Director, S. C. Leslie, in August 1945: 'All I feel is that the exhibition should not be too large because there will simply not be the stuff to show, and it is better to tell the President so now than to find ourselves letting in second rate things of which we shall all be secretly ashamed when the time comes' (DCA/144/312). rationing of domestic items such as furniture continued until 1952. The Board of Trade, and Clark, would also have been conscious that such an exhibition might conflict with, or steal the thunder of, the future ColD. Black's proposal was rejected: his suggestion for an exhibition on the really grand scale was impracticable, at any rate at present (TNA ED 136/188A, 6th meeting, 29 Feb 1944). Nevertheless, CEMA still wanted to be involved in a design exhibition: 'CEMA offers its service to secure an impartial selection of material, and to ensure that it shall be an exhibition of taste as well as trade'. It may be that this was Clark's intention all along; for CEMA to contribute a similar element of 'taste' to the emergent state-endorsed design exhibitions to that which he might be seen to bring to the Council of Industrial Design through his involvement: as demonstrated by the fact that even after his resignation from the chair of the Design and Exhibitions Committee, Clark accepted an invitation to review the furnished rooms component of Britain Can Make It (TGA 8812/114/1126), even though he had resigned from chairing the Design and Exhibitions Committee in late May 1945, a few weeks after Design at Home opened.

A second report was commissioned, this time from Black's DRU colleague Milner Gray, and discussed by the Panel in July 1944 (TNA ED136/188A). Even this more modest version required a budget of £3,000, much larger than any other CEMA exhibition to date, but nevertheless approved. Rather than Black's ambitious scheme to bring together industry, the professions and the public, Gray set out a similar purpose to the V&A Design in the Home exhibition of the previous year, and indeed to BCMI:

The principle [sic] aim of this exhibition is understood to be to explain to the general public the nature and function of what has come to be called Industrial Design and to foster public interest in and appreciation of good design in things of everyday use... the object here would be to emphasise that good design need cost no more than bad (Grey TNA ED136/188A).

The catalogue for Design at Home, which opened on 1 May 1945 at the National Gallery, shows that it was significantly scaled down from Gray's original proposals. It declares a more modest intention than either Black or Gray envisaged: one more in keeping with CEMAs remit:
Kenneth Clark and Design

With the close of the European war, it is felt that an exhibition relating to the problem of home furnishing and decoration in the immediate post-war period would not be inappropriate ... Anything that will encourage a display of individual taste and an interest in the pleasant task of home making, beset by difficulties though it may be, is to be desired. We have received the most friendly advice throughout from the Board of Trade, and it is most satisfactory to be able to record that the new Council of Industrial Design came into being during the period of the exhibition's production, a welcome token of the government's determination to encourage the use of good design in industry (DCA, Design at Home, 1).

Thus the CEMA catalogue takes authority to the CoI.D while asserting its own territory, taste: it then withdraws from the field. Gray's proposal indicates an attempt to reconcile what had previously been more distinct modes of display: commercial, entertainment and educative modes brought together to serve propaganda purposes. Talking of entrance fees, he attempts to locate the exhibition on such a spectrum.

In this war it has been accepted that exhibitions which are purely instructional, or propagandist and in the national interest cannot justify an admission charge; but an exhibition on Industrial Design of the type envisaged, whilst educational in aim, has a definite entertainment value and therefore could be very justifiably exempt from the above strictures (Gray TNA ED136/188A).

Playing these tensions out in practical as well as conceptual terms, Gray touches on the balance between object, staging and interpretation:

collected opinion tends to show that public interest in the purely photo-documentary show is beginning to pall. The display should comprise a large proportion of manufactured articles ... but it is equally important that these articles should be shown not as a mere museum collection but as part of a larger story running through the exhibition.

Clearly, to Gray, a conventional museum display alone will not convey a strong enough message: a letter from panel member Philip Hendy to Gray in August 1944 represents one possible museum perspective, and supports Gray's view: 'all texts are detestable in exhibitions: likewise all photos, diagrams, captions etc. etc. It seems to me the catalogue is the proper place for all such propaganda and explanations, as well as for the names of designers and manufacturers (V & A EL2/1).

There is a good deal of this kind of information in the catalogue. Noel Carrington's introduction declared: 'The whole object of this exhibition is to prove ... the ability to triumph over the deadening effects of standardization by the exercise of personal judgment and taste' (DCA, Design at Home, 2). Design at Home took a more overtly educational line than the previous exhibitions, aiming to evoke a concrete response from the visitor: 'The catalogue speaks of a design problem for each room, teaching the viewer how to solve domestic design problems by the exercise of personal choice, or taste.'

The National Gallery was not the obvious venue for a design exhibition, but in the absence of its collection (stored in Welsh mines to avoid bombing), the Gallery under Clark's direction had been used for purposes unimaginable before the war, thus attracting new audiences. Through exhibitions, concerts and picnics on the lawn outside, the wartime Gallery became a space where notions of British culture and character could be articulated. As such, it had particular associations as a venue for this exhibition. Seeking approval for the exhibition, Clark reassured the National Gallery trustees that it would be held in 'rooms unsuitable for the exhibition of paintings': the primacy of paintings was not in question (NG1/12, 3 October 1944).
Design Objects and the Museum

Bachelor Bed-sitting Room

The design problem is how to combine in one small space several different aspects of living—sleeping, dressing, reading, and entertaining friends—a problem of compounding. Practical and compact furniture is needed—then the settee by day must be a bed by night, and cupboards and drawers must give adequate storage for everything. Pictures, fabrics, and accessories give special opportunity for the expression of individual character.

Figure 1.3 ‘Bachelor bed-sitting room’ from the exhibition catalogue for Design at Home: an exhibition of furniture and furnishings, Arts Council of Great Britain/CEMA, National Gallery, 1945. Design Council Archive, University of Brighton Design Archive.

This blurring of the traditional boundaries of the museum also erupted in other ways. The V&A’s new Director, Leigh Ashton, was concerned about the involvement of both CEMA and the CoD in the display of contemporary objects, which was a function of the Museum’s long-established Department of Circulation. As early as November 1944 the V&A threatened to cut off its exhibition preparation services to CEMA (TNA ED 136/1888); in Spring 1945, perhaps provoked by the opening of Design at Home, Ashton made what Arts Council Chairman Maynard Keynes described in a letter to Mary Glasgow as ‘amount[ing] to a proposal that the V&A should take over the whole business of selecting and distributing exhibitions, instead of CEMA’ (V&A EL2/1, 15 June 1945). Later, Ashton wrote to CEMA Secretary Glasgow that the touring of exhibitions of objects was ‘not a proper duty of the Council except on special occasions’ (V&A EL2/1, 15 July 1945). Clearly on the defensive, Ashton proposed that the V&A, the CoD and CEMA should share a central depot for the storage, packing and transportation of objects, as part of the Museum’s plans for re-opening its Circulation service after the war, thus giving the Museum the pivotal role as holder of this expertise. A CoD document from around this same time entitled ‘A Policy and Programme for Exhibition’ notes, under the subheading ‘the seed for co-ordination’, stated:

The V&A . . . has many facilities for the assembling, purchase, circulation and display of objects. A valuable working partnership can be organized between the Council and the V&A which has offered untirited help. The Council might well adapt a general rule of using the V&A resources and facilities to the fullest extent wherever possible (DCA/14/14[E3]).

Indeed, as Doreen Leach has noted, Ashton also criticized the CoD’s plans in terms of both collecting and display of objects (Maguire and Woodham 1997: 224). Initially he lamented the fact that the Museum was not
represented on the Council, while Clark, Director of another national museum whose remit had nothing to do with design, was a member, albeit in a personal capacity. In May 1945, as Design at Home opened, and at around the same time as his exchanges with CEMA, Ashton was dismayed to discover that the CoD planned to purchase objects, apparently in direct competition with the Museum's Circulation Department. Ashton saw Clark as being responsible for the CoD's plan, presumably because Clark had initiated CEMA's picture-buying activities. Ashton believed he saw 'a dictatorship on modern design controlled by Sir Kenneth Clark and two Government Departments competing with each other' (Maguire and Woodham 1997: 225). In fact by late summer there might have appeared to be the threat of three competing state-funded bodies, the V&A, CEMA and the CoD, two of which were heavily influenced by Clark, who had also brought another national museum, the National Gallery, into the fray. However, with the opening of Design at Home, not only CEMA but also Clark, with his resignation from the CoD's Design and Exhibitions Committee, began to withdraw from the field. At the first meeting of that Committee, in February 1945, Clark had explained that the large-scale CEMA design exhibition had been planned before the Council had come into being; on behalf of CEMA he agreed with the suggestion that mention might be made of the Council (DCA/42/289); we have seen that the catalogue did just that. But crucially, the CoD document that recorded the V&A's offer of help also noted that CEMA 'The Arts Council has organized large and small exhibitions of design and has an informal understanding that has now been endorsed with them by which they will leave industrial art and design entirely to the Council' (DCA/14/14/E1).

A struggle for territory had been played out over the location of design exhibitions, with skirmishes between a variety of interested parties. Who in these circumstances was qualified to pass judgement on the contemporary design object? What was its status and function in these different kinds of display and venue? Could designer, manufacturer, curator and bureaucrat resolve these issues between them? Clearly committed to the importance of an exhibition of design, which fitted with his ideas about the visual arts in wartime and post-war society, Clark was happy simultaneously to be involved in multiple and potentially competing elements, employing his skills of cultural brokerage to navigate a course, at times both proactive and reactive, though not without provoking responses such as Ashton's. CEMA's exhibitions, organized largely for what Black would call propaganda purposes, with an overarching wartime purpose of consumer education, nevertheless also came under CEMA's brief of arts appreciation. In planning a larger scale exhibition of 'taste as well as trade', CEMA collided with the CoD's emerging agenda. Meanwhile, although the location of displays of design in museums gave aesthetic credibility, museums would generally consider themselves above commercial considerations, and at this time, beyond presiding over contemporary design. The siting of BCM1 at the V&A in 1946, over other possible locations such as Earl's Court (Maguire and Woodham 1997: 50), is part of this same debate about exhibiting design in the museum. The location of this small series of CEMA exhibitions within a broader aesthetic agenda begins to establish a more comprehensive set of questions than have generally been considered in relation to BCM1, when discussed as primarily a commercial or industry project. This episode contributes a richer context to those emerging post-war debates about exhibiting design in the museum.

CHAPTER 2
THE ETHOS OF THE VICTORIA AND ALBERT MUSEUM
CIRCULATION DEPARTMENT 1947–1960

Joanna Weddell

Until government cuts in 1977, the Victoria and Albert Museum (V&A) had an historic commitment to
regional design education, successfully fulfilled by its Circulation Department, which sent small and large
touring exhibitions to museums and art schools around the UK (Weddell 2012). The Circulation Department
grew from the collections of art and design formed at the Central School of Design from 1837, founded
with the aim of reforming industrial design to compete with foreign markets. These collections circulated
around the UK to Government Schools of Design and were incorporated into the South Kensington Museum,
later the V&A – Floud cites 1486 as the start of Circulation, its origins therefore pre-date the Museum
(Floud 1949:7). In 1849 Henry Cole gave evidence to the Select Committee on the Schools of Design saying:
I do not think that these schools were created for aesthetic purposes, or for general educational purposes.
I apprehend that the age is so essentially commercial, that it hardly looks to promoting anything of
this kind except for commercial purposes’ (Sheppard 1975:74–96). In a choice between Art and Industry,
it would seem that Industry won and, as others have observed, the Museum was ‘redolent of the modernity
of international exhibitions, the department store, liberal economics, technical design education and
utilitarian reform ideology [as well as] the more traditional curatorial and aesthetic motivations’ (Bartington
2006:133–145).

This chapter discusses the Circulation Department of the Victoria and Albert Museum in the period 1947
to 1960, under Keeper Peter Floud CBE (1911–1960), when Circulation (familiarly known as Circ) was the
largest department of the V&A. The Department’s ethos has been articulated as left-wing in outlook and
organization, with many staff being members of the Communist Party of Great Britain (until the Hungarian
uprising of 1956), and concerned to address the ‘working class’ as well as the elite scholarly connoisseur
(Sandino 2013). Circ was egalitarian, for example promoting female staff members and having a less militaristic
or paternalistic hierarchy than was usual in the Museum, and elsewhere in society, at that time (Adams
2010:28–42). The Department was concerned with social equality and access for all, for example through
a system where all museums paid the same transport charge regardless of distance from South Kensington,
and by ensuring that touring shows had free admission and full labels, to obviate the need for an expensive
catalogue purchase. Innovative in its approach to scholarship, for example through the use of patent books
to firmly date designs, Circ focused on Victorian and Edwardian design, unusually for the Museum at this
date when acquisitions were largely pre-1830 (Burton 1981:54). Circ was engaged with the contemporary,
being the only V&A department to seriously pursue the acquisition and display of new design objects during
this period.

I discuss some of the ways in which Circ’s exhibitions reflected this established ethos and go on to examine
in detail the Department’s attitude to contemporary design and commerce. As evidence I use Floud’s published
and unpublished writing, the Department’s travelling exhibitions and data from Circ’s acquisitions during this
period. There seem to have been tensions and oppositions between Art and Industry, with ‘industrial design’ a
particularly contested term.
Design Objects and the Museum

The Circulation Department 1947–1960

Peter Castle Floye was the dynamic and visionary Keeper of the Circulation Department between 1947 and 1960, developing a strong ethos of public service in the exhibitions programme and innovations in both display and acquisitions. Floye came from an establishment background, attending Gresham's in Norfolk and taking a First in PPE at Wadham College, Oxford. Unsurprisingly, given his degree, Floye was politicized at Oxford and, in common with many of his generation, saw the Communist Party of Great Britain as a constructive alternative to Europe's growing Fascism, being a member until 1956. In 1935 Floye joined the V&A as Assistant Keeper in Circ, after accreditation to the Museum on war service. Floye returned to Circ in January 1947, but in charge as Keeper.

Circ was a part of a broader post-war initiative by the Attlee government to promote ‘good design’ across the UK. At this date Museum staff were civil servants responsible to the Department of Education and Science and can be regarded as an arm of the state; for example, until 1983 all staff signed the Official Secrets Act. Touring ar. exhibitions were on the agenda for many European countries engaged in post-war reconstruction and Floye contributed to a special UNESCO publication on circulating exhibitions (Floye 1950). For Floye Britain not only led the world’s industrial revolution; she has a unique record of selective exhibitions of industrial designs and such regular exhibition programmes should be regarded by enlightened opinion as an essential part of progressive government (Floye 1953e:24–25).

The Department’s offices and stores were housed in the Museum’s North Court and referred to as ‘an alternative museum, a museum broken up into small, coherent units, and constantly on the road’ (Vaizey 1972), perhaps a version of André Malraux’s Musée Imaginaire with cases literally sent out beyond the museum walls (Malraux 947). Circ occupied a position outside the main museum hierarchy, with staff having a left-wing bias and many being art school graduates rather than Oxford or Cambridge graduates, with the exception of Circ’s senior staff (Floye, Wakefield and Hogben). As one long-serving member of the Department, Barbara Morris, explained, Floye treated everyone as equals and emphasized that we were there to help and educate the public rather than pursuing curatorial interests for the sake of it (Sandino 2009). Unlike the main Museum departments, which, since re-organization in 1909, had fostered a connoisseur approach specializing in particular materials, Circ’s shows were eclectic mix that not only physically broke away from the notion of an elitist, self-contained museum but also cut across the V&A’s established organizational structure.

Floye pursued the aim of ‘progressive government’ through travelling exhibitions of both traditional art and commercially produced objects, sent out to the regions from the metropolitan center of Albertopolis. The first time that a full listing of V&A travelling exhibitions appeared in Museum Journal in August 1949 (Vol. 49 No. 5), it is the geographic spread and range of Circulation exhibitions in the early stages of its operation under Floye. At this date the most northerly venue was Berwick-upon-Tweed, which received the History of Lithography; the most southerly was Hove, which saw Early English Watercolours; the most westerly was Carmarthen, which viewed Decorative Woven Textiles; and the most easterly was Norwich, which displayed a show of English Chairs. These towns and cities were hosting displays of the historical and the contemporary, the decorative and the commercial, a range of both Art and Industry for the education of the citizen.

Circ travelling exhibitions were ‘specially prepared for the typical small general museum which needs non-specialist exhibitions, appealing to a completely uninformed public’. Such exhibitions were ‘supplied with much fuller and more didactic labels than would normally accompany a Victoria and Albert exhibition’ (Floye 1950:299). Arguably such explicit aims could be seen as patronizing to provincial galleries but, given an understanding of the aims of the department, this approach may be seen as pragmatic in promoting access for all, and perhaps stands as a comment on the predominant approach at South Kensington.
culation Department between 1947 and 1983 programme and innovations in both ground, attending Greatham's in Norfolk, Jos, given his degree, Floud was politicized Communist Party of Great Britain as a member until 1956. In 1935 Floud joined the m on war service, Floud returned toCirc
ertainment to promote 'good design' across the Department of Education and 1983 all staff signed the Official Secrets Agreement countries engaged in post-war cation on circulating exhibitions (Floud notes she has a unique record of selective items should be regarded by enlightened 24-25).

im's North Court and referred to as 'an its, and constantly on the road' (Vainey sees literally sent out beyond the museum's hierarchy, with staff having a left-Cambridge graduates, with the exception of member of the Department, Barbara Wall we were there to help and educate Sandino 2009). Unlike the main Museum a connoisseur approach specializing in physically broke away from the notion of institutionalized organizational structure.

elling exhibitions of both traditional art metropolitan centre of Albertopolis. The Museum Journal in August 1949 (Vol. 49 culation exhibitions in the early stages of Berwick-upon-Tweed, which received Early English Watercolours: the most nd the most eastern was Norwich, which osting displays of the historical and the Art and Industry for the education of small general museum which needs blic. Such exhibitions were supplied with y a Victoria and Albert exhibition (Floud ng to provincial galleries but, given an een as pragmatic in promoting access for at South Kensington.

Typical of Circ's methodology was one of the early exhibitions curated under Floud, '150 Years of Lithography', 1948. Circ commissioned a poster to promote the show at regional museums from Charles Mozley and this became an exhibit in its own right, demonstrating the auto-lithograph process using successive printings (C.17459.C). The show included fifty frames and three technical exhibits, including an innovative collapsible revolving display case. The show was a combination of scholarly, historical objects, which Circ emphasized were rare early prints, illustrations of the techniques of production and up-to-date examples of contemporary printing from both home and abroad. Here we see the Department promoting a scholarly approach to art objects, improving industry and shaping the citizen's 'good taste', by negotiating between art and industry, society and the market and disseminating design to the regions. In practice then, the ethos of Circ was based on three principles: an emphasis on scholarship, for unique, securely provenanced, aesthetic objects; on material and process, supporting students, industry, export and commerce; and on contemporary design, shaping the 'good taste' of the ideal citizen as an arm of progressive government.

Floud and contemporary design objects

Floud was a pioneering scholar and curator as seen in Victorian and Edwardian Decorative Art, the major exhibition held at South Kensington in 1952 (which also toured), and his view of designers such as William...
Design Objects and the Museum

Morris was deep-eyed. In 1954 Flood used the democratic medium of radio to broadcast his conclusions that, contrary to Arts and Crafts principles, Morris & Co. did not produce “individual craftsmanship, but rather what one can call serial hand-production on a factory basis, which makes full use of the division of labour and differs very little in its moral and social implications from straightforward machine-production” (Flood 1954a). Flood’s concern for ‘moral and social implications’ prompts an assessment of Cicé’s acquisition of both unique craft objects and mass-produced industrial designs. Cicé’s acceptance of the commercial may have more in common with Cole’s earlier aims for the circulating collections, where opposition between the commercial and aesthetic had yet to harden, and where conflict between scholarly endeavour and wicked industry had yet to shower the Museum.

Under Flood’s leadership we see a Departmental understanding of the ‘moral and social implications’ of different kinds of production (craft and industrial), backed by a Keeper with a commitment to social justice (despite, or at this date one might say because of, his background) working within a state milieu favouring the promotion of good modern design across the nation. Unlike other Museum departments, which had an unofficial ‘fifty-year rule’ against purchasing recent objects, Cicé had continued the founding mission to collect contemporary design as an educational resource for manufacturers, designers and the public. At the start of the post-war period Flood could already write that ‘the circulation Department’s contemporary collections are now much more extensive than those of the main Museum’ (Flood post-1949:3). By 1955, at about the middle of Flood’s tenure as Keeper, nearly 75 per cent of Cicé’s acquisitions were of contemporary or modern objects produced in the previous ten years.

Witnessing this apparent embrace of the contemporary, Flood argued a distinction between the decorative aesthetic object and industrial commercial design. In 1957 the Council of Industrial Design (CoID, later the Design Council) proposed that the winners of their contemporary design awards were to be acquired by the V&A. Flood stated that we never have been and are not now a museum of industrial design . . . (the Museum) has always in fact been a museum of the decorative arts and never acquired objects which could be regarded as the nineteenth-century precursors of the twentieth-century concept of industrial design’ (Benton 1997:309–328).

Flood expressed reservations about the type of objects that would be appropriate and planned to ‘limit our acceptance to objects which could be regarded as forming part of the normal equipment of a living room, rejecting the idea of displaying “washing machines in the same building as, for example Renaissance sculpture”’ (Crowther 1947:11–13). Here Flood is defining acceptable design objects by their use not by their method of production: he concluded we should certainly not normally have acquired . . . pyrex ovenware or . . . melmes tableware . . . the majority of articles in Design [Magazine] now involve a range of expertise quite outside the orbit even of those of us here who cover the contemporary decorative arts’ (Benton 1997:309–328).

In contrast to this apparent rejection of utilitarian industrial design as part of the Museum’s canon, Cicé had in fact acquired a Pyrex ovenware casserole in 1949, by the simple expedient of walking across the road to Harrods and spending five shillings and sixpence (Cicé 160&A-1949). Earlier, in 1948, Cicé had also toured ‘A small exhibition showing examples of good modern design in pottery, glass and textiles, in effect, mass-produced objects for the domestic interior that had much in common with the Museum of Modern Art’s series of Useful Objects exhibitions that toured the US and featured Pyrex from 1942 (Stanisewski 1999).’

In spite of Flood’s reaction when faced with the CoID winners in 1957, in a 1949 article published in an American magazine, while avoiding the term ‘industrial design’, Flood had acknowledged that ‘the loan collections of the Victoria and Albert Museum include large collections of contemporary decorative and industrial art’ (Flood 1949:7).

Cicé’s post-war shows exhibited some British objects that were produced solely for export, as rationing precluded their sale in the UK, for example, Tablewares of Today, 1952, which would be ‘new to the public since most of the best British wares are for “export only” and most of the foreign wares cannot normally be
of radio to broadcast his conclusions that, since 'individual craftwork, but rather what takes full use of the division of labour in a forward machine-production' (Flood 1949:3). By 1955, at about the time of some contemporary or modern art exhibitions, a distinction between the decorative and industrial design (CotD, later known as the Design Centre), had become the normal equipment of a living room, with its range of objects including for example Renaissance sculpture, objects designed by their users rather than by a method of mass production, and pyrex ovenware as well as melamine furniture and some fabrics outside the art of the time. Benton (1957:329–328)

The V&A Circulation Department 1947–1960

imported into this country: These travelling shows toured to museums, galleries and public libraries to influence and educate the consumer, promoting British products and consumption. In 1956 the Department exhibited the first of a series of contemporary exhibitions described as 'industrial wares, which have been recently designed in a modern spirit', shown at South Kensington and subsequently at the Restaurant and later regional circulation. As with MoMA's precedent, these were open display units rather than in locked cases, closer to a department store display rather than in a museum setting (Wakefield 2007:234–244). The series later included national surveys of fabrics and wallpaper, bringing international design to art and design students and citizens across the UK as rationing and import restrictions were lifted. These contemporary touring collections may be seen to act as a distanced but authoritative focus for a meeting between commercial industry and decorative design, allowing them to avoid categorization as a straightforward agent of commodification or aestheticization (Wood 1996).

Flood and his team undertook extensive research into Victorian and Edwardian design, a field that time ignored by other V&A departments (Burton 1981:54), establishing a reputation for innovative and thorough scholarship brought to fruition in the 1952 Exhibition of Victorian and Edwardian Decorative Arts. Over 24,000 people attended the exhibition at South Kensington, which then travelled around the UK in various forms, for example Victorian Pottery, 1954. The original scheme was to cover the period from 1851 to 1951 and Flood proposed that: 'The Exhibition would not, of course, be limited to hand-made objects, but would also include machine-made textiles, commercially-produced ceramics, etc. These latter would,
Design Objects and the Museum

however, only be included if they were the work of known designers. To establish secure provenance Floud used contemporary press reports and doggedly followed up the descendants of those who had bought or commissioned work from significant design pioneers, successfully persuading many to loan or gift objects to the Museum. In an internal memorandum Floud describes other scholarly efforts in the field including Pevsner's 'very superficial, explicitly rejecting a 'modish display of bric-a-brac' and contrasting Circ's 'scientific and objective approach to the period' with the 'fashionable dilettantiism' of others such as Grigson and Betjeman.

Floud's original scheme further illuminates his attitude to contemporary commercial design. He hoped that:

The Final section of the Exhibition [up to 1951] would include a certain number of articles usually regarded as examples of 'Industrial Design', but only in so far as these fall within the field normally covered by this Museum. (e.g. it would include one of Ambrose Heal's early tubular-steel chairs, and Well [sic] Coates' early wireless-cabinet, because these are both examples of furniture, but kitchen-equipment, electric-irons, etc., would be excluded).

There would be no attempt to include 'the routine everyday productions of the period' but rather objects that were 'in advance of popular taste' and of 'some solid merit as the work of serious designers'. In this context industrial design is acceptable to the Museum canon, when defined by its use and design source rather than by method of production. Here the Circ ethos seems open to mass-produced design objects, as long as they are by a significant pioneering designer and not for the kitchen.

Floud and craft

It can be seen that there is some evidence of Circ maintaining the tradition of Cole's 'commercial purposes' in its circulation of technical exhibits, and pursuing 'educational and aesthetic purposes' through both historic scholarship and the acquisition of contemporary design objects. In the catalogue to the Exhibition of Victorian and Edwardian Decorative Arts Floud noted Morris's crusade against the debased standards of mid-Victorian mass-production, which Morris attributed to the influence of machine-manufacture and the disappearance of 'hand-craftsmanship'. Further Morris's doctrine was that 'true design must be based on an understanding of technical processes' (Floud 1952:38, 115). However, Floud was clearly concerned about the state of contemporary industrial design and, on the occasion of the anniversary of The Studio, took the opportunity of comparing Arts and Crafts doctrine in 1893 and 1953. Floud explicitly separated design from production, with no bias towards the handmade over the machine, or towards art rather than industry, writing:

the main pivot of current Arts and Crafts doctrine, and indeed the main criterion normally employed today in defining craft-work - namely the identity of designer and craftsman - received little attention in 1893. The founders of the Society . . . never executed their own designs, but invariably turned them over to commercial firms . . . or to professional craftsmen or women . . . present-day Arts and Crafts doctrine, by emphasizing individualistic and subjective criteria, and especially by insisting on the identity of designer and executants, defines the crafts much more narrowly than did the accepted theory of 1893. It would be valuable if the movement took the opportunity . . . to consider the extent, if any, to which the present difficult - and indeed discouraging - position of so many of the crafts is connected with this change (Floud 1953b:126–135).
